

What kind of information would be necessary and sufficient for UAP analyses?

about the phenomenon

- UAP-event description or narrative
- UAP location relative to the observer, with as much precision as practicable
- Number of UAP-objects observed during the phenomenon and indications of intra UAP-object coordination and/or communication
- Indications of advanced and/or enigmatic capabilities
- UAP characteristics, including physical state (e.g., solid, liquid, gas, plasma); description (e.g., size, shape, color); signatures; propulsion means; payload
- UAP performance envelope, including altitude and/or depth; travel path and trajectory; velocity; maneuverability
- UAP behavior, including whether under apparent intelligent control, apparent response to observation and/or observer presence, and apparent indications of indifference or hostility

about the observer

- Observer's date, time, location, and travel path for first and last observation of the UAP, with as much precision as practicable
- Observer's behavior toward the UAP
- Sensors that detected the phenomenon (e.g., visual, radar)
- Any physiological, psychological, or other effects apparently corresponding to the UAP observation
- Observer's assessment of the UAP, including the nature of the phenomenon and whether it was benign, a hazard, or a threat
- Identification of any other observers
